

DDR SO-DIMM

DDR SO-DIMM is high-speed, low power memory module that use DDR SDRAM and a 2048 bits serial EEPROM on a 200-pin printed circuit board. DDR SO-DIMM is a Dual In-Line Memory Module and is intended for mounting into 200-pin edge connector sockets.

Synchronous design allows precise cycle control with the use of system clock. Data I/O transactions are possible on both edges of DQS. Range of operation frequencies, programmable latencies allow the same device to be useful for a variety of high bandwidth, high performance memory system applications.
